MANIPAL SCHOOL OF INFORMATION SCIENCES

MANIPAL

(A constituent unit of MAHE, Manipal)

Master of Engineering - M.E in Computer Science and Engineering (Artificial Intelligence and Machine Learning)

Course Plan

Course Name	:	Applied Linear Algebra
Course Code	:	AME 5101
Academic Year	:	2026-2027
Semester	:	I
Name of the Course Coordinator	:	Dr. Devi Prasad M
Name of the Program Coordinator	:	Dr. Richa Sharma

	
Date:	10/8/2026
Signature of Program Coordinator	
with Date	

	
Date:	10/8/2026
Signature of Course Coordinator	
with Date

1.10 Course Articulation Matrix	16

Program Education Objectives (PEOs)

The overall objectives of the Learning Outcomes-based Curriculum Framework (LOCF) for Master of Engineering - M.E in Computer Science and Engineering (Artificial Intelligence and Machine Learning), programare as follows

PEO No.	Education Objective
PEO 1	Acquire solid mathematical and computational skills essential for understanding, applying, and developing modern artificial intelligence and machine learning algorithms.
PEO 2	Produce industry-ready graduates with practical experience in structuring machine learning projects using state-of-the-art software.
PEO 3	Address multi-disciplinary challenges through coursework and projects by adapting to the rapidly advancing developments in artificial intelligence and machine learning approaches.

Program Outcomes (POs)

By the end of the postgraduate program in Master of Engineering - M.E in Computer Science and Engineering (Artificial Intelligence and Machine Learning), graduates will be able to:

PO 1	An ability to independently carry out research/investigation and development work to solve practical problems.
PO 2	An ability to write and present a substantial technical report/document.
PO 3	Demonstrate a degree of mastery over the area as per the specialization of the program which should be at a level higher than the requirements in an appropriate bachelor program.
PO 4	Identify appropriate and efficient algorithmic approaches for solving real-life challenges using artificial intelligence and machine learning principles and state-of-the art software prevalent in industry and academia.
PO 5	Develop teamwork and leadership skills for addressing challenges of social importance for sustainable societal development using ethical artificial intelligence and machine learning approaches.

1. Course Plan

1.1 Primary Information

Course Name	:	Applied Linear Algebra [AME 5101]
L-T-P-C	:	3-0-0-3
Contact Hours	:	36 Hours
Pre-requisite	:	Basic Algebra and Ca;culus
Core/ PE/OE	:	Core

1.2 Course Outcomes (COs), Program outcomes (POs) and Bloom's Taxonomy Mapping

CO	At the end of this course, the student should be able to:	No.ofContact Hours	Program Outcomes (POs)	BL
CO1	Apply vector operations for similarity learning.	10	PO3	3
CO2	Analyse matrix representations in AI & ML models.	14	PO4,PO3	4
CO3	Apply matrix calculus for optimization in learning systems.	12	PO3	3

1.3 Assessment Plan

Components	Mid semester exam (MSE)	Flexible assessments	End semester exam (ESE) / Makeup exam
Duration	90 minutes	2 assignments. 15 days each.	180 minutes
Weightage	0.3	0.2	0.5
Typology of questions	Applying and Analyzing	Applying and Analyzing	Applying and Analyzing
Pattern	Answer all 5 questions of 10 marks each. Each question may have 2 parts of equal marks.	Apply and analyze solutions to real-world problems.	Answer all 10 questions of 10 marks each. Each question may have 2 parts of equal marks.
Schedule	As per academic calendar.	September 15 and October 10	As per academic calendar.
Topics covered	Vectos, matrics, GPU/TPU support for deep learning systems.	Vectors, matrices, efficient solutions on GPU/TPUs.	Comprehensive examination covering the full syllabus. Students are expected to answer all questions.

1.4 Lesson Plan

L. No.	TOPICS	Course Outcome Addressed
L0	Course delivery plan, Course assessment plan, Course outcomes, Program outcomes, CO-PO mapping, reference books.	---
L1	Conceptual introduction to vector spaces and vector operations. Scalar product.	CO1
L2	Introduction to matrices. Types of matrices. Operations. Matric-vector multiplication.	CO2
L3	Inner and outer products. Norm of a vector. Distance - standard deviation. Standardizations versus normalization.	CO1
L4	Linear independence and basis vectors.	CO2
L5	Systems of linear equations: over and under-determined systems.	CO2
L6	High-dimensional vector embeddings as in Word2Vec/Glove.	CO1
L7	High-dimensional vector embeddings as in LLMs.	CO1
L8	Linear operations on embeddings: Finding relationships, combining and isolating concepts, and analogies.	CO3
L9	Linear operations on embeddings: Finding relationships, combining and isolating concepts, and analogies.	CO2
L10	Solving linear equations.	CO1
L11	Matrix Multiplication: Dot Products, Dimensions, and Linear Transformations	CO3

L12	How GPUs Execute Matrix Multiplication in Parallel	CO3
L13	NVIDIA GPU Architecture: Threads, Memory, and Specialized Compute Units	CO2
L14	NVIDIA GPU Architecture: Streaming Multiprocessors, Memory Hierarchy, and Tensor Cores	CO2
L15	Least squares: problem motivation and examples.	CO3
L16	Solving least squares problems - least square data fitting.	CO1
L17	Attention Mechanism in Transformer Architectures.	CO3
L18	Formal Algorithms for Transformers - Inference	CO3
L19	Formal Algorithms for Transformers - Multi-Head Attention	CO2
L20	Implementation of Attention Mechanism.	CO2
L21	Feedforward Neural Networks (FFNs): Composing Linear and Nonlinear Functions for Classification	CO2
L22	Training the FNNs - Forward Pass.	CO1
L23	Deerivatives of Single-Valued Functions with Applications to FFNs.	CO3
L24	Partial Differentiation of multivariate functions	CO1
L25	Partial Differentiation and Gradients.	CO3

L26	Gradients of Vector-Valued Functions.	CO2
L27	Loss Functions and Their Gradients.	CO3
L28	Gradients of Vectors with respect to Matrices; Gradients of Matrices with respect to Matrices.	CO3
L29	Training the artificical neural networks - Backward propagation of errors.	CO3
L30	Training the artificical neural networks - Backward propagation of errors.	CO3
L31	Forward and Reverse-Mode Automatic Differentiation.	CO1
L32	Computational Graphs and Their Applications in Deep Learning	CO1
L33	Sigmoid with Binary Cross-Entropy vs. Softmax with Categorical Cross-Entropy.	CO2
L34	Linear/Identity activation functions at the output layer and Mean Squared Error (MSE) loss.	CO2
L35	Backpropagation for Binary and Multiclass Classification	CO2
L36	Output-Layer Gradients for Binary and Multiclass Classification.	CO2

1.8 Assessment Plan

COs		Marks & Weightage				
CO No.	**CO Name**	**MSE Marks (Max. 50)**	**Assignment Marks (Max. 20)**	**ESE Marks (Max. 100)**	**Actual CO wise Weightage**	**Expected CO wise Weightage**
CO1	Apply vector operations for similarity learning.	30	5	10	**0.28**	**0.28**
CO2	Analyse matrix representations in AI & ML models.	20	5	50	**0.42**	**0.39**
CO3	Apply matrix calculus for optimization in learning systems.	0	10	40	**0.30**	**0.33**
	Marks (weightage)	**0.3**	**0.2**	**0.5**	**1.00**	**1.00**

Note:

- In-semester Assessment is considered as the Internal Assessment (IA) in this course for 50 marks, which includes the performances in class participation, assignment work, class tests, MSE, quizzes etc.
- ESE for this course is conducted for a maximum of 100 and the same will be scaled down to 50 for grading.
- ESE marks for a maximum of 50 and IA marks for a maximum of 50 are added for a maximum of 100 marks to decide upon the grade in this course.

Weightage for CO1 = (MSE marks for CO1 / 1.6666 + Assignment marks for CO1/1.0 + ESE marks for CO1 / 2)/100

1.9 Assessment Details

The assessment tools to be used for the Current Academic Year (CAY) are as follows:

Sl. No.	Tools	Weightage	Frequency	Details of Measurement (Weightage/Rubrics/Duration, etc.)
1	MSE	0.3	1	• Performance is measured using MSE attainment level. • Reference: question paper and answer scheme. • MSE is assessed for a maximum of 50 marks and scaled down to 30 marks.
2	Assignments	0.2	2	• Performance is measured using assignments/quiz attainment level. • Assignments/quiz are evaluated for a maximum of 20 marks.
3	ESE	0.5	1	• Performance is measured using ESE attainment level. • Reference: question paper and answer scheme. • ESE is assessed for a maximum of 100 marks and scaled down to 50 marks.

1.10 Course Articulation Matrix

CO	PO1	PO2	PO3	PO4	PO5
CO1			Y		
CO2			Y	Y	
CO3			Y		
Average Articulation Level			*	*
